

TRIBAL STUDIOZ RCB No.: 52949415M

Date : 16 June 2026

Student : Lin Zhiyuan

Dear Sir/Madam,

**Letter of Recommendation for Lin Zhiyuan – Early Admission Exercise (EAE) to
Singapore Polytechnic and Ngee Ann Polytechnic**

I write this letter in strong support of Lin Zhiyuan's EAE application for the Diploma in Electrical and Electronics Engineering at Singapore Polytechnic, the Diploma in Mechanical Engineering at Singapore Polytechnic and Ngee Ann Polytechnic. I have had the privilege of coaching Zhiyuan as the external robotics coach for Admiralty Secondary School's Robotics CCA over the past four years, in my professional capacity with Tribal Studioz. During this period, I have observed his exceptional technical aptitude, disciplined engineering mindset, and clear readiness for polytechnic-level study. More importantly, I have come to know him as a young person of strong character—one whose technical capability is matched only by his integrity, resilience, and genuine passion for engineering excellence. I have consistently noticed an exceptional level of dedication in Zhiyuan regarding his fabrication work. It is not uncommon for him to invest time after school and during weekends in his projects, often putting in long hours as competitions approach. His self-motivated quest for excellence—his readiness to work when others might not—is seldom witnessed to this extent in a student of his age. This commitment has garnered him respect and admiration from his teammates, who deeply value his dedication to continuous improvement, high standards, and innovation.

His competitive record showcases his sustained technical expertise:

- **World Robot Olympiad (WRO) 2024:** Earned a Gold Medal (Exploration Award) and a Silver Medal (RoboMission Junior Runner-Up). The team was subsequently selected to represent Singapore at the International Finals in Turkey.

- **World Robot Olympiad (WRO) 2025:** Achieved Gold at the National level and Silver at the National Finals.
- **WRO International Finals 2025:** Achieved 35th place out of 112 international teams, making them the highest-placed Singaporean team at the event.
- **FIRST LEGO League (FLL) 2024/2025:** Secured both the Robot Performance Award (Champion) and the Champions Category Overall Champion Award—the highest honor in the competition. Additionally, the team was selected to represent Singapore at the International Finals in Houston, Texas.

Through these rigorous competitive experiences, Zhiyuan has honed strong programming skills, especially in Python during the FLL 2025 season. Significantly, he worked alongside his peers to create a Pybricks (Python programming) template intended for future junior competitions. Beyond digital design, Zhiyuan has extensive hands-on experience in physical realisation. He has designed and 3D-printed custom robot parts for competitions and works confidently across CAD tools, including BrickLink Studio and TinkerCAD. He thoroughly understands the constraints that fabrication imposes on design and has consistently refined his work through iterative prototyping and testing. Critically, he combines this practical skill with an engineer's discipline: his work is consistent, structurally sound, and thoroughly tested before deployment.

Beyond his competitive success, Zhiyuan has been an integral part of Singapore's local technology ecosystem. He served as a key beta tester for Tribal Studioz's latest innovation, EVO—a cutting-edge robotics microcontroller platform designed specifically for high-level competitions. This platform is proudly designed, developed, and made in Singapore as a "For SG, By SG" initiative. The invaluable feedback and rigorous testing provided by Zhiyuan directly contributed to EVO being awarded the Best Open Hardware Platform at WRO 2025.

His ability to provide sophisticated technical insights helped us refine a homegrown product that now represents Singaporean engineering excellence on the global stage.

In his role as Vice President of his robotics club, Zhiyuan leads by example—setting high technical standards and working harder than anyone he leads. His commitment to team performance, mature self-awareness, and unwavering drive mark him as someone who excels in collaborative environments. These are precisely the qualities that will enable him to thrive in polytechnic group projects, industry internships, and future leadership pathways.

I give this recommendation with full confidence. Beyond his technical skills, he faces challenges with resilience, showcases a genuine passion for his work, and maintains a strong sense of integrity. He is a dedicated student who values doing things correctly—not just for accolades, but because his own standards require it. Over the past four years, he has consistently demonstrated that he possesses both the technical foundation and the character necessary to excel at the polytechnic level. I strongly recommend him for admission and believe he will be an outstanding fit for your program.

Yours faithfully,

GilbertHeng
